www.coars.co.uk

NOW AVAILABLE -
MICRON FLUKE AND WORM TESTING
SERVICE

We are now able to offer at our Garstang store a fluke and worm testing service. The Micron kit allows us to test faecal samples for fluke and worms, helping us to accurately identify the condition and prescribe the most suitable wormer to treat it.

- Rapid results
- Small sample of droppings required
- Reduces hours of unnecessary dosing
- Testing enables targeted treatment
- Less money spent on non-essential worming
- Reduces the rate of wormer resistance
- Available for cattle, sheep and horses

A micron test is £17 plus VAT and the testing service is available Tuesday to Friday. The faeces sample should be as fresh as possible, but it will be okay for us to analyse samples up to about 36 hours old.

Testing will be done at the end of the day, after about 3pm. Following the test we will email or WhatsApp you an in depth report along with brief advisory recommendations.

The results speak for themselves. Testing for fluke and worms with our Micron kit just makes sense!

SILAGE SHEETS

We are one of the largest suppliers of silage sheets in the north of England.

We regularly sell over 3000 sheets and all the major buying groups buy their sheets from us. Before you consider placing an order elsewhere ask us for a price!

A full range of sizes is available.

Give us a call or order via your farm salesman!

SILOSTOP MAX

THE ORANGE SILAGE FILM

Max sits against the surface, eliminating surface spoilage by restricting oxygen permeation and reducing the development of moulds and undesirable bacteria, including butyric acid bacterial spores in the peripheral areas of the clamp during the storage period. Max also enhances the anaerobic stability of the silage face, reducing waste at feed out. Trials have shown that High Oxygen Barrier (HOB) films reduce dry matter (DM) losses in the top layer of the clamp by 41% and reduce inedible DM by 73% compared to non-oxygen barrier films.

FLY CONTROL IN CATTLE

As many Dairy & Beef systems have intensified so too has the need for effective fly control. Flies start breeding from the end of March, so start treating from April to reduce fly numbers and the volume of chemical needed.

Products available include:

- Butox Swish
- Deltanil
- Flypor
- Spot-On
- Spotinor

All available at competitive prices!

INTRA REPIDERMA

The aerosol answer to antibiotic free hoof and skin care.

- Gives visible results after the 1st day
- Contains chelated and micronized copper & zinc
- Penetrates deeply & quickly through the skin
- Micronised powdered organic minerals
- Patented antibiotic free product
- Protective layer for the hooves and skin
- Strong adhesion, for at least 3 days
- Sprays at every angle, even upside down
- For hoof, udder cleft, dehorning, navel and skin care
- Each aerosol contains 80-100 applications
