CATTLE ZEN

SUPPORTING CALM IN HEALTHY CATTLE

CattleZen is a unique blend of two synthetic pheromones designed to maintain calm in cattle of all ages:

When to use and how it works:

Cattle Zen should be used on healthy cattle to maintain balanced behaviour and mitigate the negative impacts of stress associated with handling, transport, mixing of animals, and other management practices.

1. **Apply above the muzzle**

A single-site, low volume, topical application to the skin above the muzzle. No injection, no ingestion – just apply and go.

2. **Pheromones are detected**

The animal inhales the pheromone blend, which is sensed by the vomeronasal organ

3. **Calming signals are sent to the brain**

Signals from the vomeronasal organ maintain the animal's sense of calm.

4. **Balanced behaviour is maintained**

CattleZen mitigates the negative impact of stress induced by handling, transport, mixing animals and other necessary management practices.

ELIVEC

EPRINOMECTIN POUR ON WORMER FOR CATTLE

- The convenience of a broad-spectrum Pour-On
- Most potent and fastest acting endectocide available.
- Absorbed more rapidly – faster acting.
- Sustained activity to kill more species of worms for longer than any other pour-on.
- No milk withholding period.
- Short meat withhold.
- Completely weatherproof – not just rainfast.

We have a great seasonal price available on Elivec Pour On. Ask for details!

OCTOBER NEWSLETTER

EVANS CRUSADER

DISINFECTING LAUNDRY DETERGENT FOR RE-USABLE PRE-MILKING CLOTHS

Crusader assures powerful cleaning, bleaching and disinfection of cloths which are used for teat cleaning before milking.
