HYDOR TUBE VENTILATION SYSTEMS

Hydor's Tube Ventilation System supplies fresh air to all parts of the building to dilute airborne pathogens and irritants. This system is particularly suitable for calf housing, smaller cow sheds and equine facilities.

Extending through the length of the shed above animal height the system provides a constant, positive supply of fresh air to the animals immediate location, diluting foul air and ensuring even temperatures irrespective of outside weather conditions.

Dust, cobwebs, condensation, humid atmosphere and damp beds are all a precursor to pneumonia and health problems, furthermore, a lack of adequate ventilation leads to a build-up of ammonia and microorganisms.

The Tube Ventilation System has been proven to reduce cases of pneumonia as a result of damp and humid air conditions, particularly in calves.

Simple installation and low running costs.

Ask for details.

COARMINS - PREMIUM QUALITY BAGGED FREE ACCESS MINERALS FOR CATTLE

The importance of all year round good quality mineral supply has never been more important. Small deficiencies will limit performance long before they show up as a clinical deficiency. Correctly formulated, the COARMINS bagged free access minerals are an effective way of providing animals with their daily requirements of minerals.

COARMINS CATTLE GP

Excellent general-purpose supplement designed to complement winter rations and grazing for all beef and dairy cattle. Containing a balance of key minerals, vitamins and trace elements, the formulation helps to support health and boost livestock performance.

When to use - All year round for beef and young dairy cattle from 10 weeks upwards, suckler cows and dairy heifers.

COARMINS CATTLE HIGH MAG

Ideal for feeding during spring or autumn staggers risk period. The enhanced level of magnesium is provided to be highly available and palatable.

When to use - Spring and Autumn.

COARMINS DRY PRE CALVER

Very high specification mineral formulated to prevent milk fever, ease calving and boost early lactation. Introduce to cows at drying off and feed until lactation diet is fed. With a zero calcium formulation, the product features high levels of available phosphorus and magnesium, for the muscle tone necessary for easy calving.

When to use - Throughout dry period until lactation diet is fed.

COARMINS HIGH PHOS

With a high 8% phosphorus level and high levels of key micronutrients this mineral has been specifically formulated to support herd fertility and overall health. Contains multiple copper sources including chelated forms for optimum bio-availability to help optimise cow fertility.

When to use - For all suckler and dairy cows from calving through to bulling.
